## POWERTEX Chain Block PCB-S2

User Manual

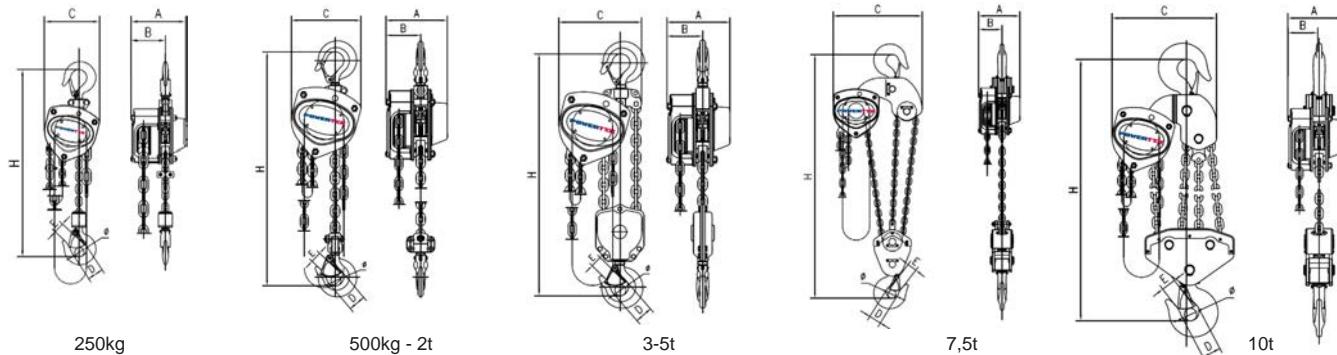

# POWERTEX Chain Block PCB-S2 0,25 – 10 tonnes

## Instruction for use (GB) (Original instructions)

Read through these user instructions carefully before using the chain block. Improper operation may lead to hazardous situations!

### General safety provisions

- Only to be used by trained operator.
- Do not use in explosive or corrosive environment.
- Temperature range: -10°C up to +50°C.
- Check the function of the chain block before use. See "Daily checks" on page 3.
- Full function of the brake system can only be secured at a minimum load of 30 kg for capacities (WLL) up to 1 ton, and for capacities (WLL) above 1 ton, the minimum load to be greater than 3% of the rated capacity (WLL).
- Do not exceed the maximum load.
- Handle the chain block with care. Do not throw the block about or let it fall to the ground.
- Do not use the chain block for welding work where it is exposed to welding spatter or current.
- The chain block must not be used for lifting persons.

Safety factor: 4:1.

Dynamic test coefficient: WLL x 1,5.

Generally according to EN 13157.

## Function

The load hook is raised or lowered by pulling on the hand chain.

The load will remain where it is when the hand chain is released because of the effective reaction brake.

Max. hand force need to be respected to avoid overloading of the hoist.

The Over Load Protection (OLP) versions are additionally equipped with an overload protection device that will limit the force that can be applied using the hand chain.

If the OLP device is activated the hand chain will rotate but the hoist will not continue to lift, only lowering is possible.

The overload protection device is adjusted in the factory to approx. 1,3 x WLL and the device normally don't need to be adjusted.

## Suspension of chain block

Suspend the block from an eye, shackle, girder trolley etc. with sufficient load capacity. With the chain tightened, both hooks must be vertically aligned.

**NB!** No bending stresses may be applied to block, hooks or load chain.

## Raising/lowering

Only use straps and slings of sufficient load capacity. Check that the load is not anchored to the floor/ground or is otherwise fixed before making the lift. Ensure that the load chain hangs vertically and has no kinks. The hand chain must also be in good condition and easily accessible. The load is raised or lowered by pulling the hand chain in either direction.

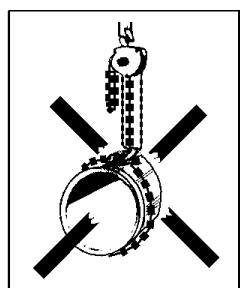

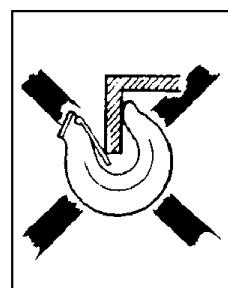

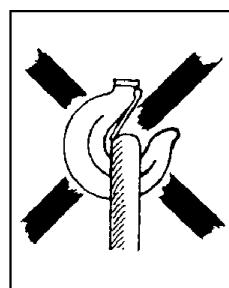

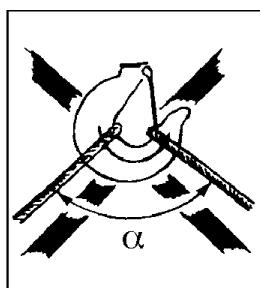

**Warning:** Do not overload the brake by prolonged lowering. It may cause brake function to fail.

## Warning:

- Only hand power from a single person is permitted on the hand chain. If the chain feels too heavy, use a bigger chain block or reduce the load.
- Make sure no-one stands beneath a hanging load.
- Do not step onto a hanging load.
- Do not raise or lower so far that the load hook hits the block housing.
- The chain block must not be used for pulling loads.
- The block must not be subjected to dynamic stresses, for example where a load connected to the block is launched from a height.
- Do not leave a block with a suspended load unattended.

## Attachment of loads

Check the equipment before use. Improper attachment of loads can be highly dangerous (see Figs. 2 a – 2 e).

**Fig 2 a**

The sling is applying load to the hook tip

**Fig 2 b**

Excessive top angle on sling!  
α max. 60°

**Fig 2 c**

Hook latch obstructed

**Fig 2 d**

**Fig 2 e**

Load chain must not be used as a sling

## Multiple lifting

Multiple lifting entails special risks. This is when two or perhaps more hoists are used simultaneously for the same load. Danger to persons and material damage can arise due to dynamic stresses and uneven load distribution causing individual hoists to become overloaded. A competent person with experience in multiple lifting must therefore supervise this type of lifting tasks.

The total weight of the target object and its load distribution must be known or calculated.

For a variety of reasons, the centre of gravity can be difficult to determine, and thus so will the distribution of the load each chain hoist must bear.

In cases where heavy, bulky loads must be handled and it is not possible to estimate all factors correctly, the working load limit (WLL) of each chain hoist must be reduced by at least 25%.

## Daily checks

After every working day on which the chain block has been used, the following should be checked:

- Is the chain block deformed or otherwise damaged? Are any parts missing?
- Is any deformation or other damage visible on the suspension device (eye, shackle, bolt, trolley etc.)?
- Are the hooks intact or have any hooks opened? Are the hook latches correct and functional?
- Wipe down the chain block and oil the load chain as required.
- The load chain must be undamaged, i.e. no signs of wear and no deformed or otherwise damaged links.
- The load chain must not be kinked or twisted. With two-fall or multi-fall chain blocks there is a risk of the chain twisting if the bottom hook assembly ends up looped through the chain sling – usually during refitting or moving the chain block between work stations. See Fig 3.
- The hand chain must also be in good condition.
- The brake function must be intact.

In the event of faults or failures, the block must be repaired and carefully checked by a specialist before reuse.

### Continuous maintenance - lubrication

Oil the hook latches and bearings. Grease the pawl and ratchet and also the gear. Lubrication must be sparingly and carefully applied so no grease gets on the brake disk. Oil the load chain for longer life.

### Periodic checks

Periodic checks are normally carried out yearly to detect and remedy any faults. If required (e.g. high frequency of use), more frequent checks may be carried out. See "Checklist for periodic checks". Measure hooks and chain to detect any changes in shape.

#### Checks on load hook (see Fig. 4 and Table 1)

Opening dimension C on the hooks is important. A hook with too large a maximum dimension has been exposed to overloading or overheating. It therefore does not have the necessary load capacity. The hooks may also have been exposed to long-term wear (dimension K).

Hooks must be discarded and replaced if:

- The maximum C value is exceeded (according to Table 1)
- The minimum K value falls short (according to Table 1)
- The hook shows signs of cracking
- The hook is deformed or otherwise damaged

Defective hooks must be replaced before using the chain block again.

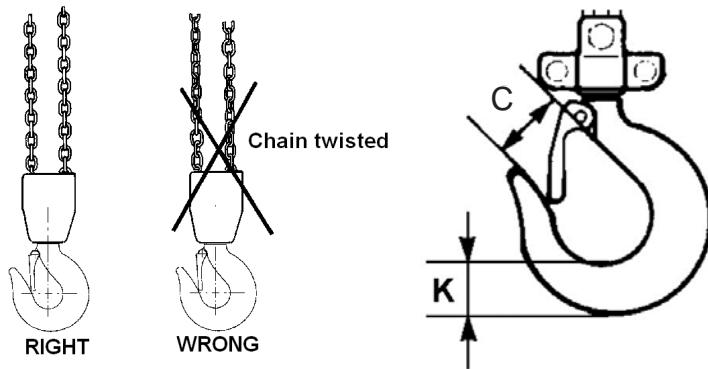

Fig. 3 The chain must not be twisted

Fig. 4 Load hook

Table 1 Load hook

WLL t	0,25	0,5	1	2	3	5	7,5	10
Model	PCB-S2							
Dimension C nominal mm	24	25,5	30	38,5	41,5	47	57	55
Dimension C max mm	26,4	28,0	33	42,3	45,5	51,7	62,7	60,5

Dimension K min mm	13,5	17,1	22,5	30,2	35,1	40,0	59	55,8

#### Checks on load chain (see Fig. 5 and Table 2)

Inspect the load chain over its whole length to detect any deformed or otherwise damaged links. Make a check measurement of suspect links. Measure the worn areas Also, every 300 mm (normally), make check measurements of the internal length of 5 links (pitch dimension 5xP – according to Table 2).

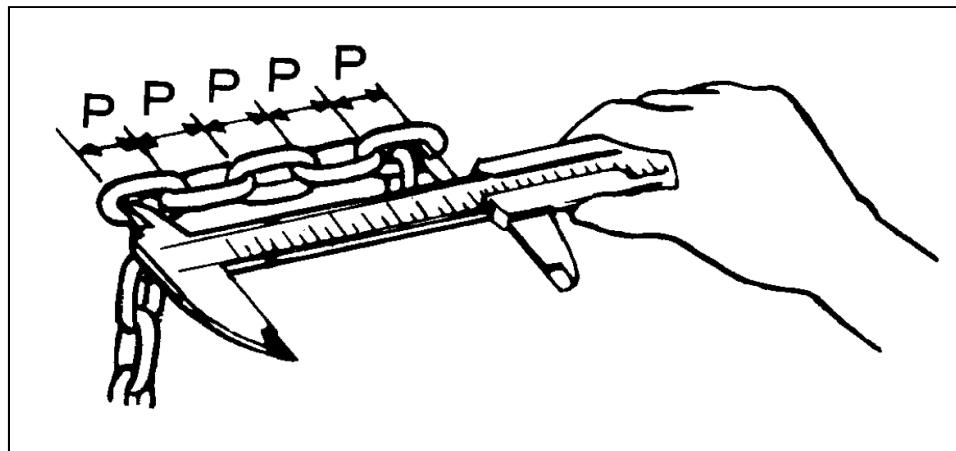

Fig 5 Checking load chain dimensions

Table 2 Load chain

Max. load t	0,25	0,5	1	2	3	5	7,5	10
Model	PCB-S2							
Link diameter nominal mm	4,0	5,0	6,3	8,0	7,1	9,0	9,0	9,0
Link diameter min. mm	3,6	4,5	5,7	7,2	6,4	8,1	8,1	8,1
Pitch dimension (5xP) nominal mm	60,0	75,0	95,0	120,0	105,0	135,0	135,0	135,0
Pitch dimension (5xP) max. mm	61,8	77,2	98,0	123,5	108,1	139,0	139,0	139,0

The load chain must be discarded and replaced if:

- cracks are detected on any link
- any link is deformed or otherwise damaged
- The minimum value of any link's diameter falls short
- the maximum value of the pitch dimension is exceeded at any point
- the chain is damaged by overheating or has been affected by weld splatter

Load chains must **not** be repaired – they must be replaced by new chain. If it is desired to lengthen the chain, it must be replaced by a new and longer chain.

Replacement of the chain shall be performed professionally by an authorized repairer and the chain must meet the requirements stated in the standard EN 818-7, Grade T from the following manufacturers: Chaineries Limousines, Pewag, Thiele or Rud.

## Repairs

The chain block must not be modified. Repairs must be carried out by specialists. Damaged parts must only be replaced with original Powertex spare parts. Order them through your dealer.

## Declaration of conformity

# POWERTEX kēdes bloks PCB-S2 0,25 – 10 tonnas

## Lietošanas pamācība (LV)

Pirms kēdes bloka izmantošanas izlasiet šo lietošanas pamācību. Nepareiza lietošana var būt bīstama!

### Vispārēji drošības noteikumi

- Drīkst izmantot tikai apmācīta persona.
- Nelietojiet sprādzenībīstamā vai korozīvā vidē.
- Temperatūras diapazons -10°C un +50°C.
- Pirms kēdes bloka lietošanas pārliecībieties, ka tas darbojas. Skatiet punktu „Ikdiens pārbaudes” 7. lappusē
- Nepārsniedziet maksimāli pieļaujamo noslodzi.
- Bremžu sistēma pilnībā darbojas pie minimālās slodzes 30 kg, ja ražotāja noteiktā robežslodze ir līdz 1 tonnai, savukārt, ja robežslodze ir virs 1 tonnas, minimālajai slodzei jābūt lielākai nekā 3% no noteiktās ražotāja noteiktās robežslodzes.
- Rīkojeties ar kēdes bloku uzmanīgi. Nemētājiet pacelšanas ierīci un neļaujiet tai nokrist zemē.
- Neizmantojiet kēžu bloku metināšanas darbos, kur tas var tikt pakļauts dzirksteļu vai strāvas iedarbībai.
- Kēžu bloku nedrīkst izmantot cilvēku pacelšanai.

## Funkcijas

Velkot rokas ķēdi tiek nodrošināta kravas āķa pacelšana vai nolaišana.

Pateicoties efektīvi reaģējošam bremžu mehānismam, atlaižot rokas ķēdi, kravas novietojums paliks nemainīgs.

Jāievēro nepieciešamais maksimālais rokas spēks, lai nepieļautu ierīces pārslodzi.

Vinčas ar Over Load Protection jeb Pārslodzes ierobežotāju tiek nodrošinātas ar ierīci, kas nosaka maksimālo slodzi izmantojot rokas ķēdi.

Ja OLP ierīce tiek aktivizēta, tā bloķē pacelšanas mehānismu, tikai nolaišanas funkcija darbosies.

Rūpničā Pārslodzes ierobežotājs tiek noregulēts uz apmēram 1,3 x WLL un parasti tā nav jākoriģē.

## Ķēdes bloka piekāršana

Piekarriet ķēdes bloku pie pietiekami izturīgas cilpas, skavas, sijas troleja utt. Kad ķēde ir nostiepta, abiem āķiem ir jāatrodas vertikālā stāvoklī.

**Uzmanību!** Bloku, āķus un kravas ķēdi nedrīkst pakļaut lieces spēka iedarbībai.

## Pacelšana/nolaišana

Lietojet tikai pietiekami izturīgas siksnes un cilpas. Pirms pacelšanas pārliecinieties, ka krava nav piestiprināta pie grīdas un ir kustināma.

Pārliecinieties, ka kravas ķēde karājas vertikāli un nav samezglota. Arī rokas ķēdei ir jābūt labā kārtībā un ērti aizsniedzamai. Kravas pacelšana un nolaišana notiek, velkot rokas ķēdi.

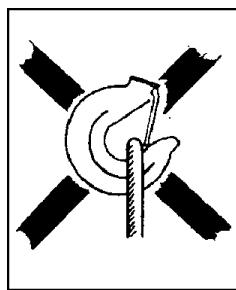

**Brīdinājums:** Nepārslogojiet bremzi nolaižot kravu pārlieku lēni. Tas var izraisīt bremžu darbības traucējumus.

### Uzmanību:

- Rokas ķēdi drīkst vilkt tikai viens cilvēks. Ja ķēde ir pārāk grūti kustināma, izmantojet lielāku bloku pretestības samazināšanai.
- Zem paceltas kravas nedrīkst atrasties cilvēki.
- Aizliegts kāpt uz paceltas kravas.
- Nelaujiet kravas āķim pacelšanas vai nolaišanas laikā saskarties ar bloka korpusu.
- Ķēžu bloku nedrīkst izmantot kravu vilkšanai.
- Bloku nedrīkst pakļaut dinamiskās slodzes iedarbībai, piemēram, metot zemē pie bloka piestiprinātu kravu.
- Neatstājiet paceltu kravubez uzraudzības.

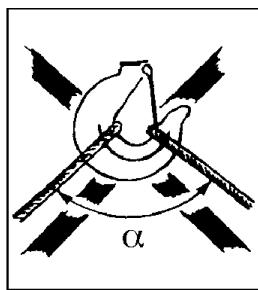

## Kravu stiprināšana

Pirms lietošanas pārbaudiet aprīkojumu. Nepareizi piestiprinātas kravas var būt joti bīstamas (skatiet 2.a5.e attēlu).

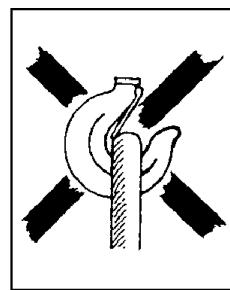

**2.a attēls.**

**2.b attēls.**

**2.d attēls.**

Āķa gals tiek liekts

**2.e attēls.**

Kravas ķēdi nedrīkst izmantot cilpas vietā.

## Kombinētā pacelšana

Kombinētā pacelšana ir sevišķi bīstama. Kombinētā pacelšana ir kravas pacelšana ar divām vai vairākām vinčām vienlaikus. Dinamiskās slodzes un nevienmērīgs slodzes sadalījums var izraisīt atsevišķu vinču pārslodzi, kas savukārt rada apdraudējumu cilvēkiem un materiāla kaitējuma risku. Tāpēc kombinētā pacelšana jāuzrauga speciālistam ar pieredzi šāda veida pacelšanas darbos.

Jāuzzina vai jāaprēķina kopējais mērķa objekta svars un slodzes sadalījums.

Dažādu iemelsu dēļ varētu būt grūti aprēķināt smaguma centru un tādējādi arī slodzi, kas jāizturt katrai vinčai. Ja jāpaceļ joti smagas beramkravas un nav iespējams pareizi novērtēt visus faktorus, katras vinčas maksimālā pieļaujamā slodze (MPS) jāsamazina vismaz par 25%.

## Ikdienas pārbaudes

Katras darba dienas beigās pēc bloka izmantošanas ir jāpārbauda:

- Vai ķēdes bloks nav deformēts vai citādi bojāts? Vai nav pazudušas kādas detaļas.
- Vai ir redzami kādi vizuāli piekares ierīces (cilpas, skavas, skrūves, troleja) bojāumi.
- Vai āķi ir veseli un neviens no tiem nav atvēries? Vai āķu aizturi ir atbilstoši un darbojas.
- Noslaukiet ķēdes bloku un ieļlojiet kravas ķēdi pēc vajadzības.
- Kravas ķēde nedrīkst būt bojāta, t.i., tajā nedrīkst būt nodilušu, deformētu vai citādi bojātu posmu.
- Kravas ķēde nedrīkst būt savijusies vai samezglota. Izmantojot ķēdes blokus ar diviem vai vairākiem polispastiem, pastāv risks, ka ķēde var sapīties, ja apakšējais āķis tiek izvērts cauri ķēdes cilpai, kas visbiežāk notiek, pievienojot ķēdes vai pārvietojot bloku uz citu darba vietu. Skatiet 3. attēlu.
- Arī rokas ķēdei ir jābūt labā kārtībā.
- Bremzēm ir jābūt darba kārtībā.

Ja tiek atklātas kļūmes vai defekti, pirms darba turpināšanas pacelšanas ierīce ir jāsalabo un rūpīgi jāpārbauda speciālistam.

## Regulāra apkope – eļļošana

Ieļlojiet āķu aizturus un gultņus. Ieļlojiet sprūdu un sprūdratu, kā arī zobračus. Eļļošana ir jāveic piesardzīgi un uzmanīgi, lai eļļa nenonāktu uz bremzes diska. Ieļlojiet ķēdi, lai pagarinātu tās kalpošanas laiku.

### Periodiskās pārbaudes

Lai konstatētu un novērstu defektus, reizi gadā jāveic periodiskas apkopes. Ja nepieciešams (piemēram, ja ierīce tiek izmantota ļoti daudz), pārbaudes var veikt biežāk. Skatiet punktu „Periodisko pārbaužu kontrolsaraksts”. Veiciet āķu un kēžu mērījumus, lai konstatētu izmaiņas to formā.

### Kravas āķa pārbaudes

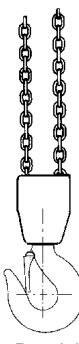

(skatiet 4. attēlu un 1. tabulu)

Iz svarīgs āķu atveres C platums. Ja šis izmērs āķiem ir pārāk liels, tie var tikt pārslogoti un pārkarst. Tāpēc tiem nav nepieciešamās kravnesības. Āķu nodilums var rasties arī ilgstošā laikā (izmērs K).

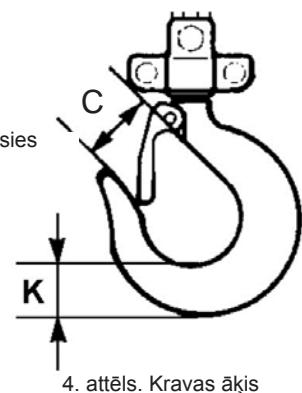

Āķi ir jāmaina, ja:

- ir pārsniegts maksimāli pieļaujamais C izmērs (saskaņā ar 2. tabulu);
- izmērs K ir mazāks nekā minimāli pieļaujamais (saskaņā ar 2. tabulu);
- uz āķa parādās plaisāšanas pazīmes;
- āķis ir deformēts vai citādi bojāts.

Pirms atsākt lietot kēdes bloku bojātie āķi ir jānomaina.

3. attēls. Kēde nedrīkst būt sagriezusies

### Kravas kēdes pārbaudes

(skatiet 5. attēlu un 2. tabulu)

Pārbaudiet kēdi visā tās garumā, lai pārliecinātos, ka tajā nav deformētu vai citādi bojātu posmu. Izmēriet posmus, kuri liekas šaubīgi. Izmēriet nodilušās vietas. Ikk pēc 300 mm (apmēram) izmēriet arī 5 posmu kopējo garumu (soļa garums 5xP – saskaņā ar 2. tabulu).

5. attēls. Kēdes mērīšana

### 2. tabula. Kravas kēde

Maksimālā slodze, tonnas	0,25	0,5	1	2	3	5	7,5	10
Modelis	PCB-S2							
Posma diametrs, nominālais mm	4,0	5,0	6,3	8,0	7,1	9,0	9,0	9,0
Posma diametrs, minimālais mm	3,6	4,5	5,7	7,2	6,4	8,1	8,1	8,1
Soļa garums (5xP), nominālais mm	60,0	75,0	95,0	120,0	105,0	135,0	135,0	135,0
Soļa garums (5xP), maksimālais mm	61,8	77,2	98,0	123,5	108,1	139,0	139,0	139,0

Kravas kēde ir jāmaina, ja:

- kāds no posmiem ir ieplaisājis;
- kāds no posmiem ir deformēts vai citādi bojāts;
- kāda posma diametrs ir mazāks par minimāli pieļaujamo;
- kādā vietā tiek pārsniegts maksimāli pieļaujamais soļa garums;
- kēde ir tikusi sabojāta karstuma vai metināšanas dzirksteļu ietekmē

Kravas kēdes nedrīkst remontēt – tās ir jāmaina pret jaunām. Ja vēlaties kēdi pagarināt, ir jāiegādājas jauna, garāka kēde.

Uzstādīšana kēdes, lai veiktu profesionāli pilnvarotā remontētāja un kēdi jāatbilst noteiktajām prasībām standartā EN 818-7, klase T no šādiem ražotājiem: Chaineries Limousines, Pewag, Thiele vai Rud.

### Remontdarbi

Kēdes bloku nedrīkst modifīcēt. Remontdarbus drīkst veikt tikai speciālisti. Bojātās detaļas ir jānomaina ar oriģinālām POWERTEX detaļām. Pasūtiet tās pie savas piegādātāja.

ar šo deklarāti, ka iepriekš aprakstītais POWERTEX izstrādājums atbilst EK Mašīnu direktīvai 2006/42/EK un EN 13157.

### Periodisko pārbaužu kontrollsaraksts (parasti – reizi gadā, ja nepieciešams – biežāk)

Ikdienas	Reizi gadā	Pārbaudes objekts	Pārbaudes metode	Piezīme
<b>Marķējums</b>				
X	X	Tehniskā plāksnīte	Vizuāli	Ja uzraksti uz tehniskās plāksnītes ir grūti salasāmi, tā ir jāmaina.
<b>Darbība</b>				
X	X	Pacelšana un nolaišana	Pārbaude bez kravas	Ir jābūt dzirdamai klusai, klikšķošai skaņai.
-	X	Pacelšana un nolaišana	Pārbaudiet ar nominālo kravu vismaz 300 mm augstumā.	Kravas kēdes rats un kēde darbojas labi. Bremzes darbojas. Kēdi var vienmērīgi pavilk ar roku, nepieliekot pārāk lielu spēku.
<b>Āķi</b>				
X	-	Āķa atveres platums	Vizuāli Mērīšana	Izskatās normāli Skatiet 4. attēlu un 1. tabulu.
X	X	Deformācija	Vizuāli	Deformācija nav saskatāma
X	X	Āķa gultnis	Vizuāli	Normāls brīvgājiens
X	-	Nodilums, plaisas, deformācija un korozija	Vizuāli Mērīšana	Nav redzamu defektu Skatiet 4. attēlu un 1. tabulu.
X	X	Āķa aizslēgs	Vizuāli	Darbojas, atspere nav bojāta
<b>Kravas kēde</b>				
X	-	Solis	Vizuāli Mērīšana	Izskatās normāli Izmēriet, ja šaubāties Skatiet 5. attēlu un 2. tabulu.
X	-	Nodilums	Vizuāli Mērīšana	Izskatās kārtībā Izmēriet, ja šaubāties Skatiet 5. attēlu un 2. tabulu.
X	X	Deformācija	Vizuāli	Deformācijas nav. Izmēriet, ja šaubāties
X	X	Plaisas u.tml.	Vizuāli	Plaisu nav
X	X	Rūsa	Vizuāli	Rūsas nav
<b>Korpuiss</b>				
X	X	Rāmis	Vizuāli	Deformācijas un rūsas nav
X	X	Pārnesumu kārba	Vizuāli	Deformācijas nav
-	X	Zobrati	Vizuāli pēc demontāžas	Nav būtiska nodiluma vai plaisu
-	X	Kravas kēdes rats	Vizuāli pēc demontāžas	Nav būtiska nodiluma vai plaisu Nav plīsumu un deformācijas
-	X	Rokas kēdes rats	Vizuāli	Nav būtiska nodiluma vai plaisu Nav plīsumu un deformācijas
-	X	Gultni	Vizuāli, pārbaude	Bez bojājumiem, vienmērīga darbība
<b>Skrūves</b>				
X	X	Skrūves, uzgriežņi, kniedes, tapas utt.	Vizuāli	Nedrīkst būt nozaudētas. Pievelciet, ja valīgi. Ja vajadzīgs, mainiet.
<b>Bremzes</b>				
-	X	Bremžu disks	Vizuāli	Nomainiet, ja nodilis
-	X	Bremžu skrūve	Vizuāli	Bez būtiska nodiluma
-	X	Sprūds un sprūdrats	Vizuāli	Nomainiet nodilušās detaļas. Uzmanīgi ieeļojiet ar smērvielu.

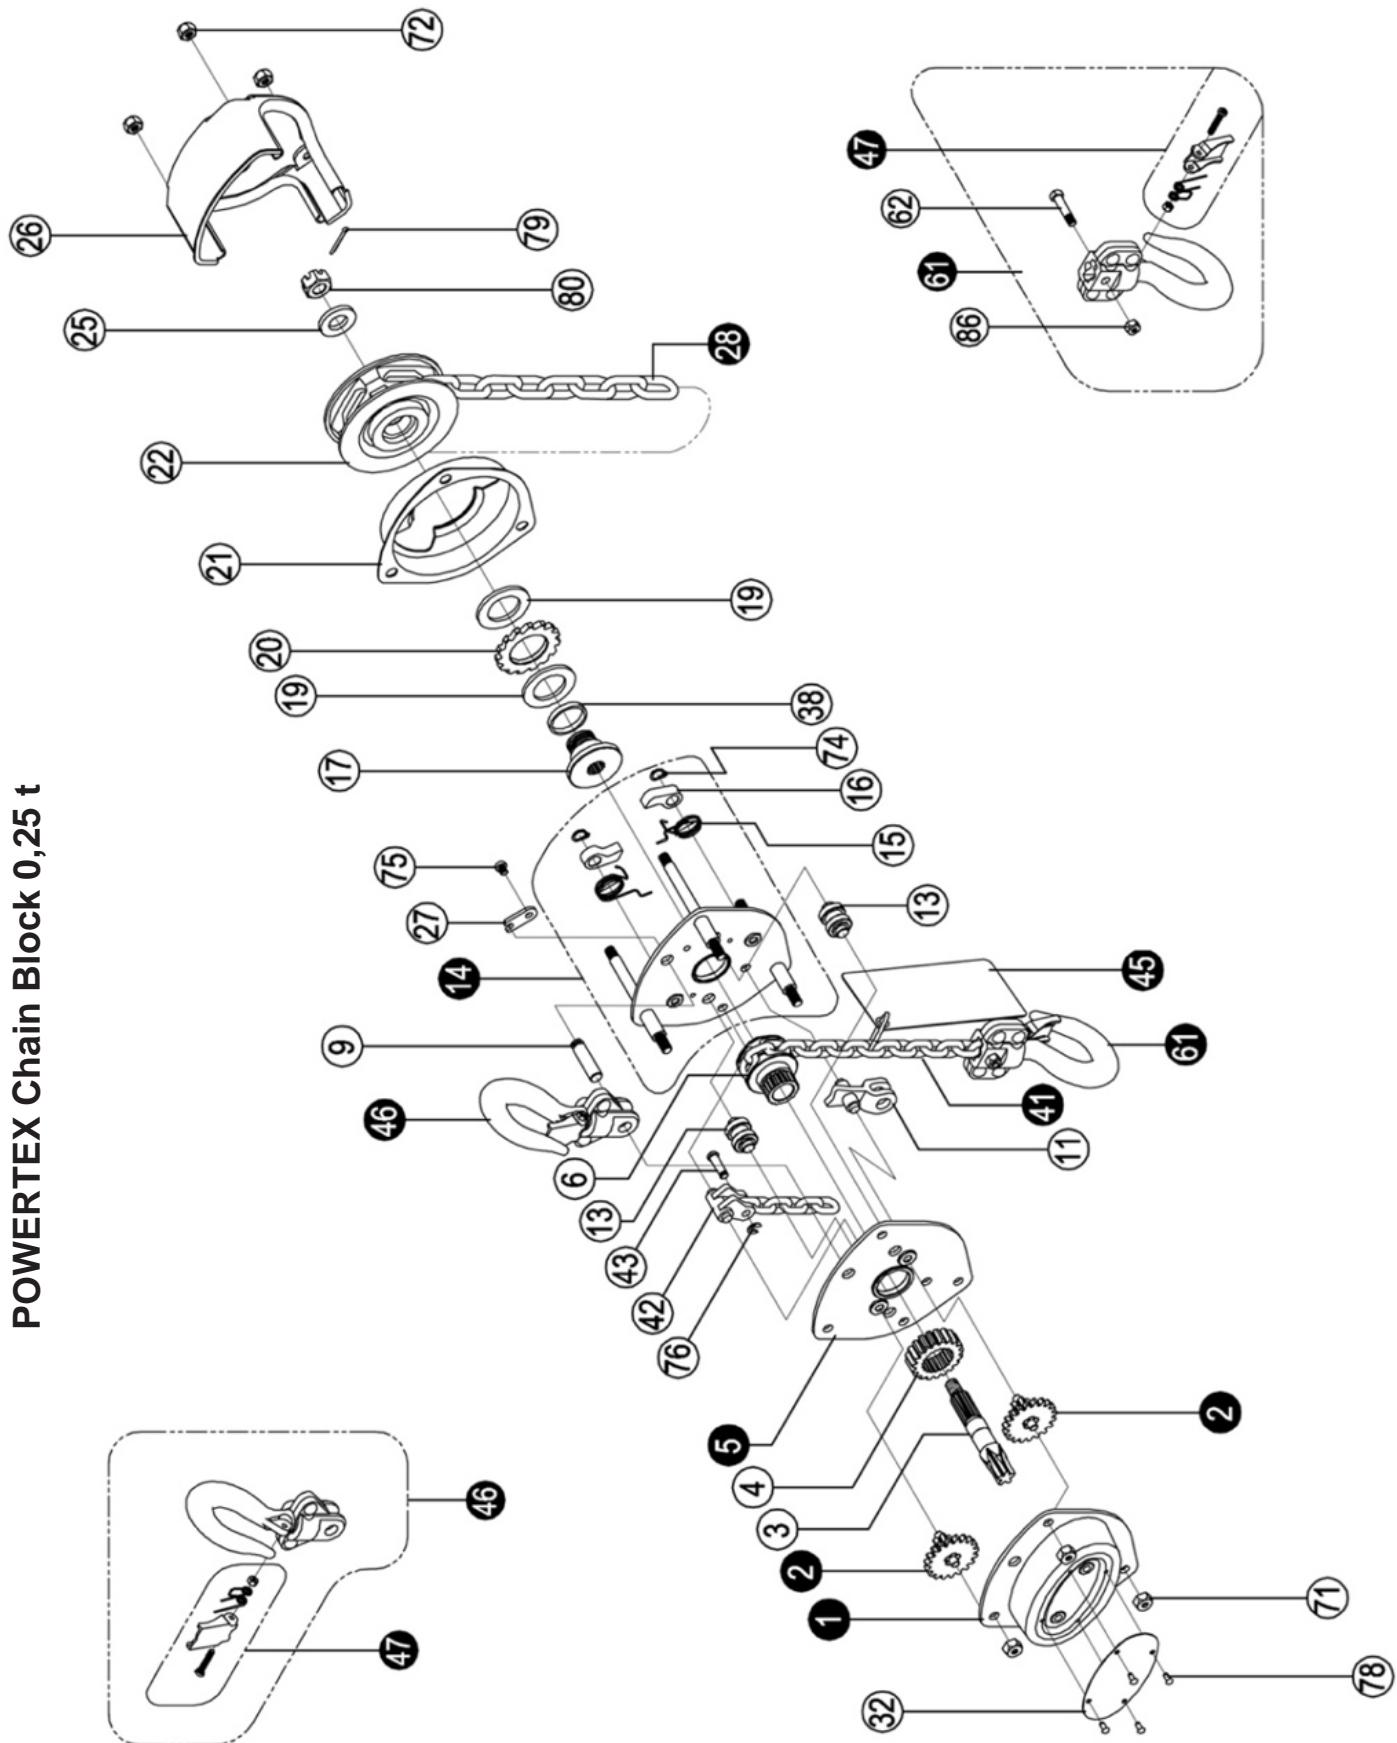

**POWERTEX Chain Block PCB-S2 – Spare parts 0,25 t**

When ordering spare parts, specify model, WLL, part number and the quantity needed.

When ordering chain, also specify lifting height.

If the load chain has been damaged or worn out the load sheave probably has to be replaced.
